

# We Bond Anything

## Bonding different technologies to suit you!

### Survival Craft Inspectorate

February 2011

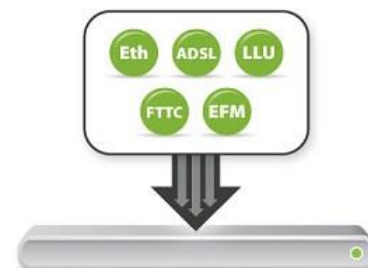

#### Summary:

Survival Craft Inspectorate supply and maintain marine equipment on a global scale.

In 2012 Survival Craft Inspectorate approached Evolving Networks with a need for more upload capacity and better resiliency in order to meet their customer support commitments. The higher upload capacity was required to cater for large file transfers and to allow better access for local users.

Survival Craft Inspectorate needed minimal risk whilst implementing any potential change in connectivity. To ensure the solution provided would suit all requirements, Evolving Networks conducted an audit of all locally available connectivity options and tailored a number of resilient, bonded options. Ultimately a solution of bonded ADSL & EFM was chosen.

#### Solution:

By providing a bonded ADSL & EFM connection, Evolving Networks were able to meet Survival Craft Inspectorate's needs: High quality bandwidth for download and upload performance, plus dual technology resilience. By using multiple carriers (BT and TalkTalk) Evolving Networks are also delivering dual carrier resilience at the customer site.

#### Bonded Solution:

**Bonded ADSL & EFM**

#### Benefits of Solution:

- High availability & failover capacity at all levels.
- Increased speeds from an EFM connection for better upload.
- Constant monitoring from Evolving Networks technical engineers
- Total visibility of the connection made available for the client through eView Live, Evolving Networks monitoring system.
