

Monitoring and Telemetry Collection

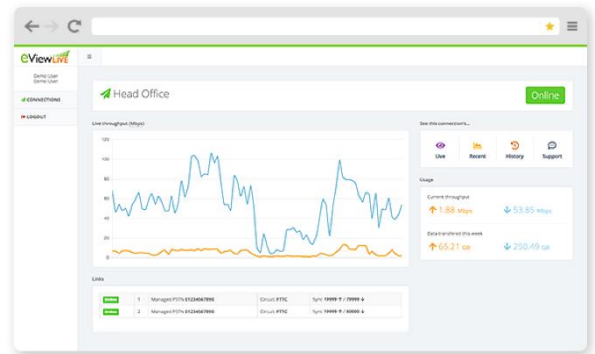

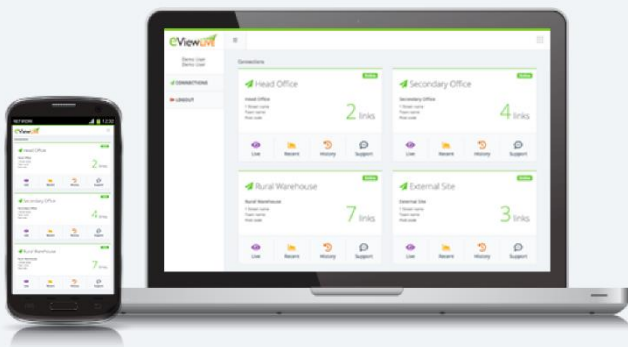

When we first started 10 years ago, before all the SD-WAN companies were even thinking about trading, we pioneered connectivity solutions that would one day be described as Software-Defined. Resilient, aggregated, multi-line connectivity with a software overlay over a private network.

We quickly realised the power of such a connectivity configuration, and so continued to develop software solutions to improve the quality of business connectivity in the UK.

This was the start of our ecosystem, and it's foundation is network monitoring.

We didn't want customers ringing up with faults, or to find out the status of their connection. We wanted to be proactive, and to be transparent. eView Live was born.

AI at its Core.

Supporting the delivery of our access technology is an ecosystem of services and platforms that control and **optimise every aspect**.

An **orchestration engine** for complete control.

A monitoring and analytics suite for **visibility and situational awareness**.

A **diagnostics platform** for automated analysis and optimisation.

With a powerful AI at its core, this interlocking group of platforms ensures every connection we deliver is

Automated, enhanced, self-healing
